

Sujoy Mondal

Founding Engineer | Product Engineer | Systems Architect | Remote-First

PROFESSIONAL SUMMARY

Founding Engineer and Systems Architect with 15+ years of experience designing, building and operating production software systems across SaaS platforms and browser runtime environments.

Over the last 10+ years, sole engineering owner of a European SaaS platform serving museums, cathedrals and tourism institutions. Led platform evolution into an offline-first runtime featuring browser-based execution systems, analytics infrastructure, AI orchestration, real-time synchronization, browser AR and payment integrations.

Specializes in solving practical production problems under real-world operational constraints and evolving systems through pragmatic architectural decisions.

PROFESSIONAL EXPERIENCE

Neareo (MyAppZone SRL), Belgium

Co-Founder & Chief Technology Officer · Dec 2015 – Present

Platform & Scale

- Built and operated a production no-code platform powering visitor experiences across Europe, used by visitors from 35+ countries and generating 600+ verified visitor reviews.

Offline-First Runtime Architecture

- Designed offline-first browser runtime using IndexedDB, Service Workers, adaptive media pre-caching and checkpoint/restore mechanisms.
- Developed browser-based runtime systems supporting conversational navigation, media interactions, offline persistence, session recovery and dynamic orchestration.

Analytics Infrastructure

- Designed and evolved analytics infrastructure from SQL-heavy aggregation toward precomputed analytics architectures and IndexedDB-backed processing capable of serving reporting workloads at operational scale.

AI Orchestration

- Designed and implemented multi-provider AI orchestration infrastructure supporting OpenAI, Claude, Gemini, DeepSeek, Kimi K2 and fal.ai.

Real-Time Sync & Browser AR

- Built distributed synchronization systems using WebSockets for synchronized exhibit playback, kiosk coordination and multi-device visitor experiences.
- Implemented browser-based AR experiences including markerless artifact recognition, face detection and 3D model overlays.

Navigation & Payments

- Designed indoor navigation systems including floor detection, polygon geofencing and browser-based wayfinding.
- Built payment and ticketing infrastructure integrating Stripe, PayPal and kiosk payment providers.

CAREER HIGHLIGHTS

15+ Years

Production Engineering

10+ Years

Solo Engineering Owner

600+

Verified End-User Ratings

35+

Countries Served

TECHNICAL STACK

Frontend

JavaScript · TypeScript · React · Tailwind CSS · AngularJS

Backend

Node.js · Express · PHP

Databases

PostgreSQL · MySQL · Redis · Supabase

Infrastructure

DigitalOcean · Vercel · Railway · Git · PM2

Runtime

IndexedDB · Service Workers · WebSockets

AI & APIs

OpenAI · Claude · Gemini · DeepSeek · Kimi K2 · fal.ai

Payments

Stripe · PayPal

SocialDeal Technologies, Brunei Darussalam

Tech Head (Remote) · Dec 2013 – Nov 2015

- Led architecture, development and operational ownership across multiple e-commerce and SaaS platforms built on Magento, CodeIgniter and CakePHP, spanning frontend, backend, database design, deployment and production support.
- Worked directly with stakeholders to translate commercial requirements into production systems while managing platform operations, customer-facing issues and continuous feature delivery across the full software lifecycle.

Webskitters Technology Solutions

Senior Web Developer · Dec 2012 – Nov 2013

- Designed and built complex browser-based applications including interactive product configurators, state-driven customization systems and advanced JavaScript interfaces.
- Implemented browser-side business logic, dynamic configuration systems and rich user interactions across multiple production projects.

Magento

PHP

Artis Technology Pvt. Ltd.

Junior Web Developer · Apr 2011 – Nov 2012

- Built browser automation workflows and OCR-assisted data extraction pipelines processing hundreds of thousands of records, replacing months of manual effort with automated browser-side execution.
- Developed JavaScript-driven browser interactions, validation workflows and client-side processing systems, establishing deep expertise in browser behavior and automation engineering.

Engineering Portfolio & Case Study Platform (2026)

Live: sujoymondal-tech.vercel.app

- Designed and built a public engineering platform for documenting production architecture, runtime systems, platform evolution case studies and lessons learned from 15+ years of production engineering.
- Implemented responsive frontend architecture, backend APIs, SEO optimization, Open Graph integration and Google Search Console indexing.
- Deployed using Vercel and Railway with PostgreSQL-backed persistence and Git-based CI/CD workflows.
